

## ADDING UP THE COSTS

### Plan

Make a list of all the things you spend money on each month. Then estimate the monthly cost of each item.

Expense	Cost	Expense	Cost

### Prepare

**A** Find out how much you spend every month. Then draw two charts. Display your original prediction in one chart and your actual expenses in the other.

**B Group work** Share your charts with the group. Based on your findings, do you agree or disagree that teenagers should pay rent?

### Present

**Class activity** Have a debate. Team A argues that teenagers living at home should pay rent. Team B disagrees. Use the information in your charts to support your argument. Try to convince the other team that you are right!
