

CHART OF

FROM DRAWINGS MADE AT MADEIRA

MARS

BY N. E. GREEN IN 1877

The details of this Chart have been compared with views of the planet by Schiaparelli, Trouvelot, Terby, De la Rue, Lockyer, Knobel, Christie, Maunders, Brett, Dreyer, and others. No form is introduced that has not been confirmed by the drawings of at least three observers.

The northern portion of the Chart is supplied from drawings made in 1873, and may be considered provisional. The names, with a few exceptions, are those employed by Mr. Proctor in his Chart of Mars, adapted, as far as possible, to recent observations. New names have been added by the author where required.
