

FIGURE 7.24. Typical vertical sequences of grain size and sedimentary structures due to waves. After Craft and Bridge (1987). Black is mudstone; white is sandstone. Bases of strataseets are sharp and erosional, and may contain flute marks, gutter casts, tool marks, and burrows. Burrows also occur in upper parts of strataseets. Top parts of strataseets may be eroded. Wr = wave-ripple lamination, Hcs = hummocky cross strata, Pl = planar strata.
