

OBSERVATIONAL COSMOLOGY

Introduction 9

Chapter I Space and time 11

Introduction	11
1.1 Olbers' paradox	11
1.2 Olbers' paradox in a different way	12
1.3 Metrics: the Universe in a nutshell	13
1.4 Redshift and time dilation	19
1.5 Cosmological parameters	21
1.6 The age of the Universe	25
1.7 The flatness problem	27
1.8 Distance in a warped spacetime	28
1.9 The edge of the observable Universe	31
1.10 Measuring distances and volumes	32
1.11 The fate of the Universe	35

Chapter 2 The cosmic microwave background 40

Introduction	40
2.1 The discovery of the cosmic microwave background	40
2.2 The CMB temperature as a function of redshift	42
2.3 Why is the CMB a black body?	45
2.4 Baryogenesis	46
2.5 The entropy per baryon	47
2.6 Primordial nucleosynthesis: a thousand seconds that shaped the Universe	47
2.6.1 The primordial fireball	47
2.6.2 The primordial element abundances	50
2.7 The need for new physics	52
2.8 The inflaton field	57
2.9 The primordial density power spectrum	60
2.10 The real music of the spheres	67
2.11 The CMB dipole	70
2.12 The acoustic peaks in the CMB	72
2.13 The Sachs–Wolfe effect	74
2.14 Reionization	76
2.15 Cosmological parameter constraints	76
2.16 The polarization of the CMB	79
2.17 Dark energy and the fate of the Universe	83

Chapter 3	The local Universe	92
	Introduction	92
3.1	Evidence for dark matter	92
3.2	The Hubble tuning fork	94
3.3	Spiral galaxies and the Tully–Fisher relation	96
3.4	The fundamental plane of elliptical galaxies	98
3.5	Clusters of galaxies	99
3.6	The Sunyaev–Zel’dovich effect	100
3.7	The morphology–density relation	102
3.8	The Butcher–Oemler effect	104
3.9	The cooling flow problem	105
3.10	The cosmological distance ladder	105
3.11	The large-scale structure of the Universe	108
3.12	Baryon wiggles	116
Chapter 4	The distant optical Universe	120
	Introduction	120
4.1	Source counts	120
4.2	Cold dark matter and structure formation	121
4.3	Population synthesis	129
4.4	Photometric and spectroscopic redshifts	132
4.5	Luminosity functions	135
4.6	Active galaxies	139
4.7	Deep-field surveys and wide-field surveys	144
4.8	Morphological K-corrections	154
4.9	The blue cloud and red sequence	154
Chapter 5	The distant multi-wavelength Universe	159
	Introduction	159
5.1	The extragalactic optical and infrared background light	159
5.2	Submm galaxies and K-corrections	162
5.3	Ultraluminous and hyperluminous infrared galaxies	166
5.4	Measuring star formation rates	169
5.5	Multi-wavelength surveys	173
5.6	Cosmic star formation history and stellar mass assembly	174
5.7	Downsizing	177
5.8	Feedback in galaxy formation	178
Chapter 6	Black holes	183
	Introduction	183
6.1	What are black holes?	183

6.2	The Eddington limit	185
6.3	Accretion efficiency	188
6.4	Cosmic mass density of black holes, Ω_{BH}	193
6.5	Finding supermassive black holes	195
6.5.1	Context	195
6.5.2	Stellar and gas kinematics	196
6.5.3	Megamasers	197
6.5.4	Stellar proper motion	198
6.5.5	Broad iron X-ray emission line	198
6.5.6	Reverberation mapping	199
6.6	The Magorrian relation	201
6.7	The hard X-ray background	203
6.8	Black hole demographics	207
6.9	Observations of black hole growth and the effects of feedback	207
6.10	Merging black holes and gravitational waves	210
Chapter 7	Gravitational lensing	216
	Introduction	216
7.1	Gravitational lens deflection	216
7.2	The lens equation	220
7.3	Magnification	222
7.4	The singular isothermal sphere model	227
7.5	Time delays and the Hubble parameter	229
7.6	Caustics and multiple images	231
7.7	Other lens models	236
7.8	Microlensing	237
7.9	Cosmic shear	240
7.10	Galaxy cluster lenses	246
7.11	Finding gravitational lenses	249
Chapter 8	The intervening Universe	253
	Introduction	253
8.1	The Lyman α forest	253
8.2	Comparison with cosmological simulations	257
8.3	Ω_b and the cosmic deuterium abundance	257
8.4	The column density distribution	258
8.5	Damped Lyman α systems	261
8.6	The proximity effect	266
8.7	Ω_{HI} , the neutral hydrogen density parameter	267
8.8	How big are Lyman α clouds?	269

8.9	Reionization and the Gunn–Peterson test	270
8.10	The Lyman α forest of He II	273
8.11	The first light in the Universe and gamma-ray blazars	275
8.12	The Square Kilometre Array	277
8.13	The CODEX experiment	278
Epilogue		282
Appendix A		283
Appendix B		285
Solutions		291
Acknowledgements		312
