

FIGURE 13.58. (A) Simple depositional models for levees and crevasse splays. From Bridge (2003). Levee deposits from (B) Devonian of New York and (C) Miocene of northern Pakistan. Levee deposits thin away from main channels. Images (D) and (E) show crevasse-splay deposits from Carboniferous rock of eastern Kentucky. Sections are normal to the flow direction, and show channels cutting through lobate sandstone bodies.
