

FIGURE 13.30. Theoretical locations of erosion and deposition in a simple braided-channel pattern during changing flow stage, and cross sections, (A) and (B), showing theoretical erosion and deposition during changing flow stage plus channel migration. (1) low-stage geometry; (2) flood-stage geometry; (3) flood-stage geometry following cut-bank erosion and bar deposition; and (4) final low-stage geometry. From Bridge (1993a).
