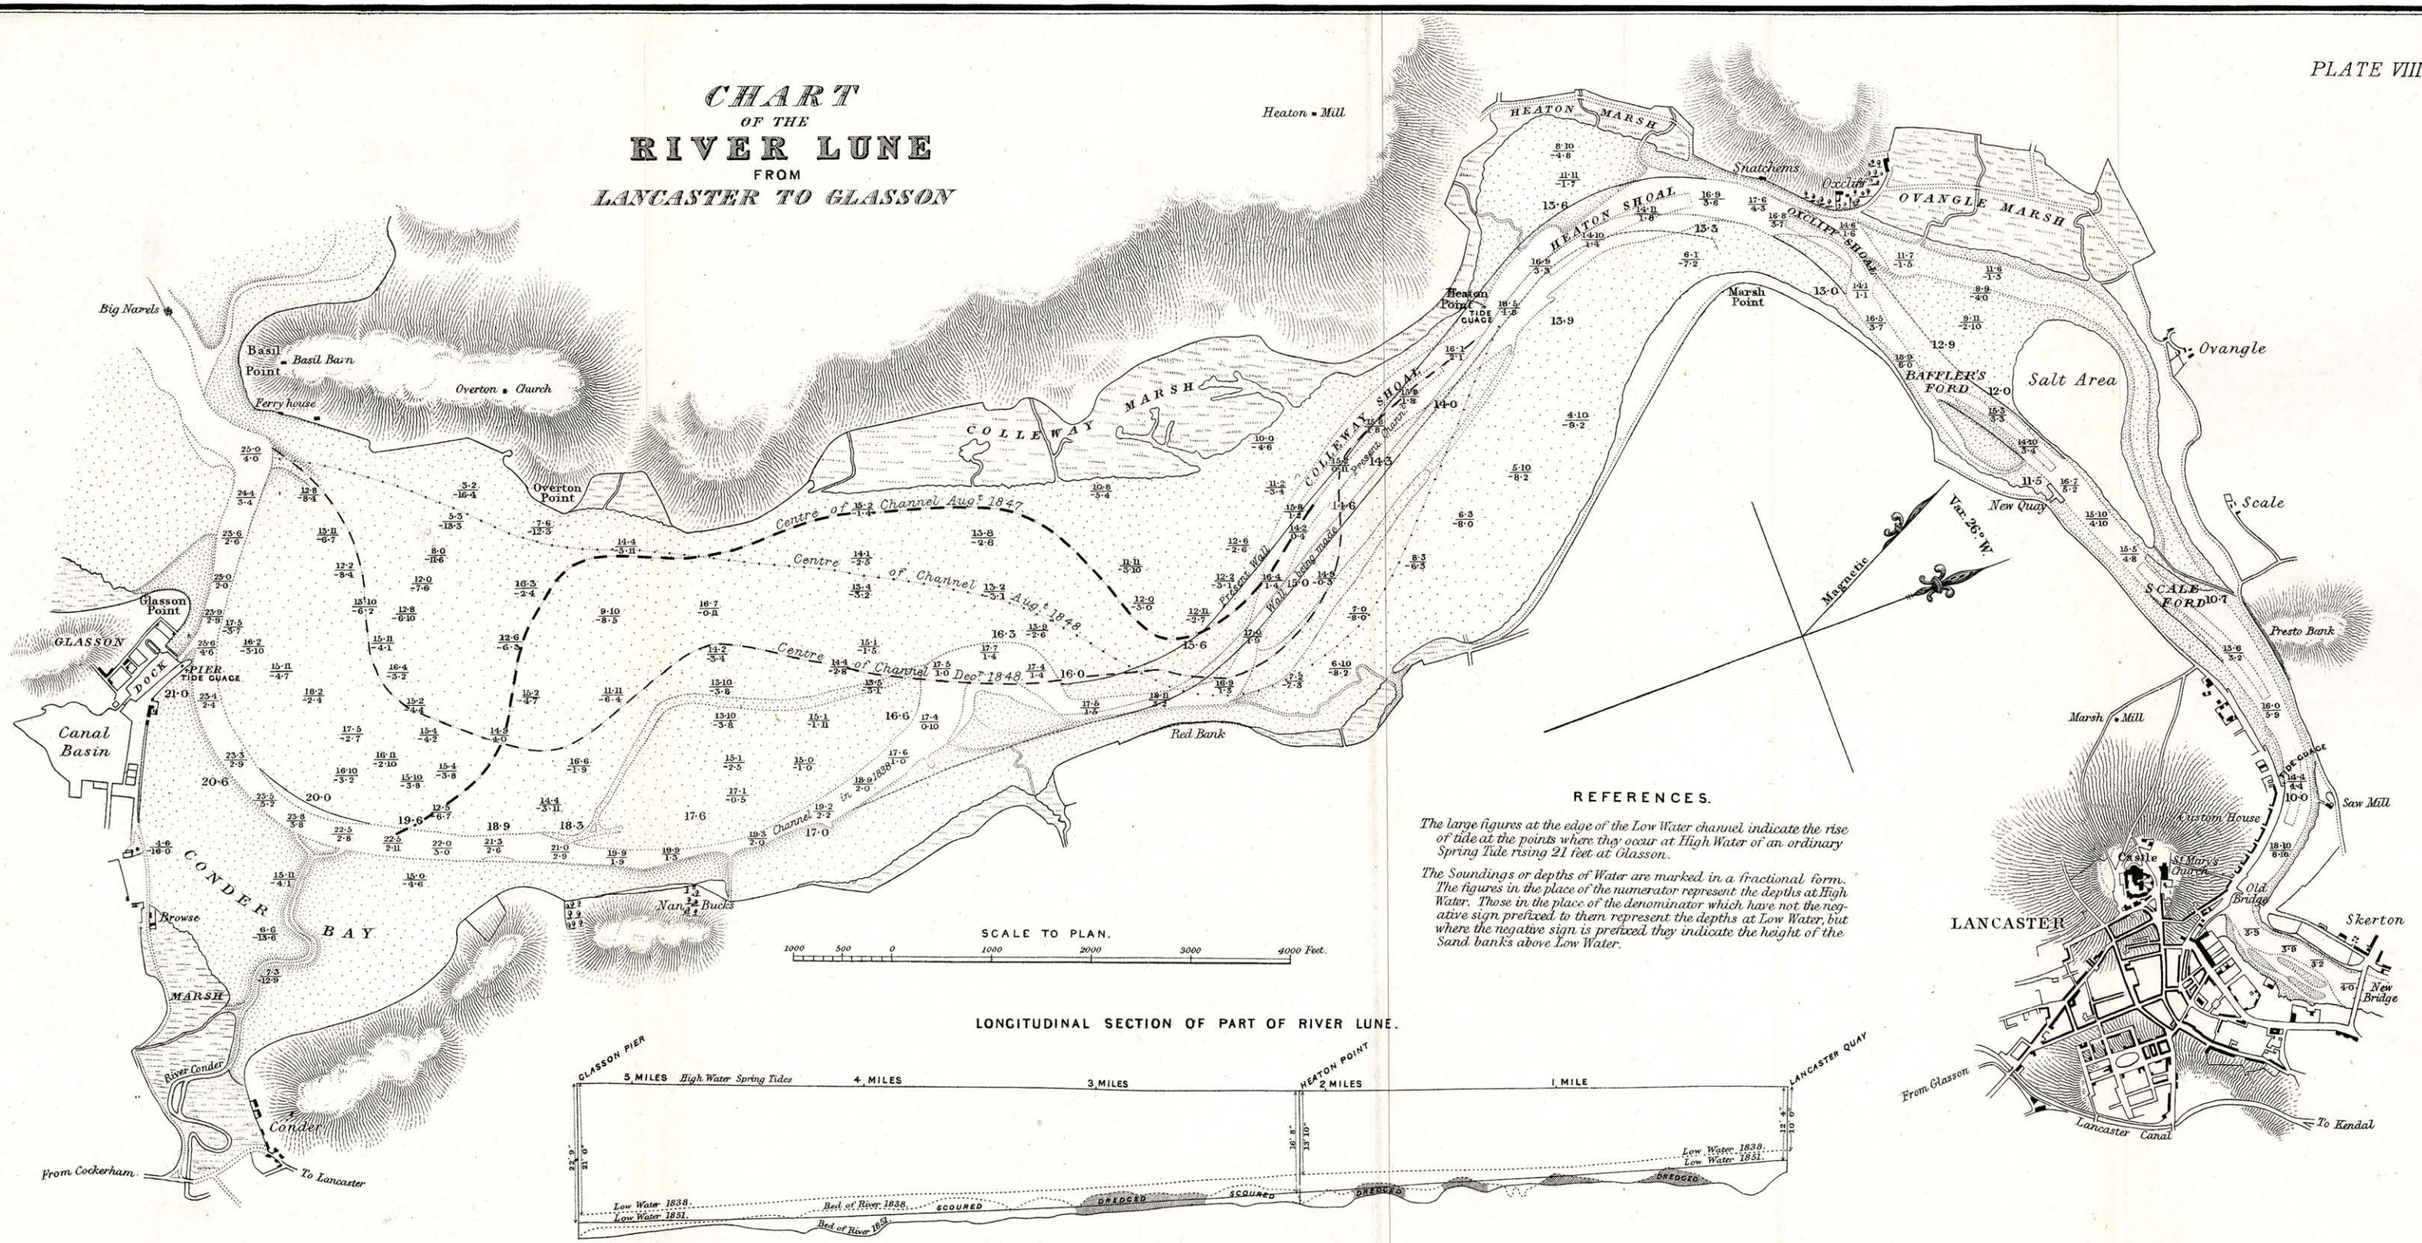
CHART OF THE RIVER LUNE FROM LANCASTER TO GLASSON



REFERENCES.

The large figures at the edge of the Low Water channel indicate the rise of tide at the points where they occur at High Water of an ordinary Spring Tide rising 21 feet at Glasson.

The Soundings or depths of Water are marked in a fractional form. The figures in the place of the numerator represent the depths at High Water. Those in the place of the denominator which have not the negative sign prefixed to them represent the depths at Low Water, but where the negative sign is prefixed they indicate the height of the Sand banks above Low Water.

SCALE TO PLAN.

1000 500 0 1000 2000 3000 4000 Feet.

LONGITUDINAL SECTION OF PART OF RIVER LUNE.
