

Plate 8 Land-cover change at Fazenda Dimona, central Amazon Basin, Brazil (Plates 3 and 4). Classes of fractions of endmembers are derived from August 1988, 1989, 1990, and 1991 Landsat TM calibrated to reflectance. Gray = primary forest; green = closed-canopy regeneration; blue = open-canopy regeneration; yellow = pasture; light orange = sparse pasture or partially cleared slash; dark orange = dry pasture or slash; black = soil. See Section 8.3.3. From Adams *et al.* (1995) with permission from Elsevier.

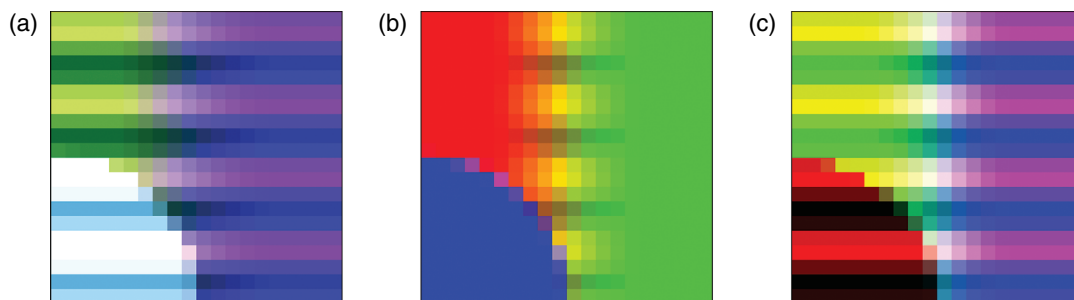

Plate 9 (a) Color composite of synthetic image. Red = channel 4; green = channel 2; blue = channel 1. (b) Color fraction composite. Red = A; green = B; blue = C. (c) Color fraction composite. Red = (1 - shade); green = A; blue = B. See Section 3.4.1 and Figures 3.2, 5.7, and 5.9.
