

Woodside Canyon 1

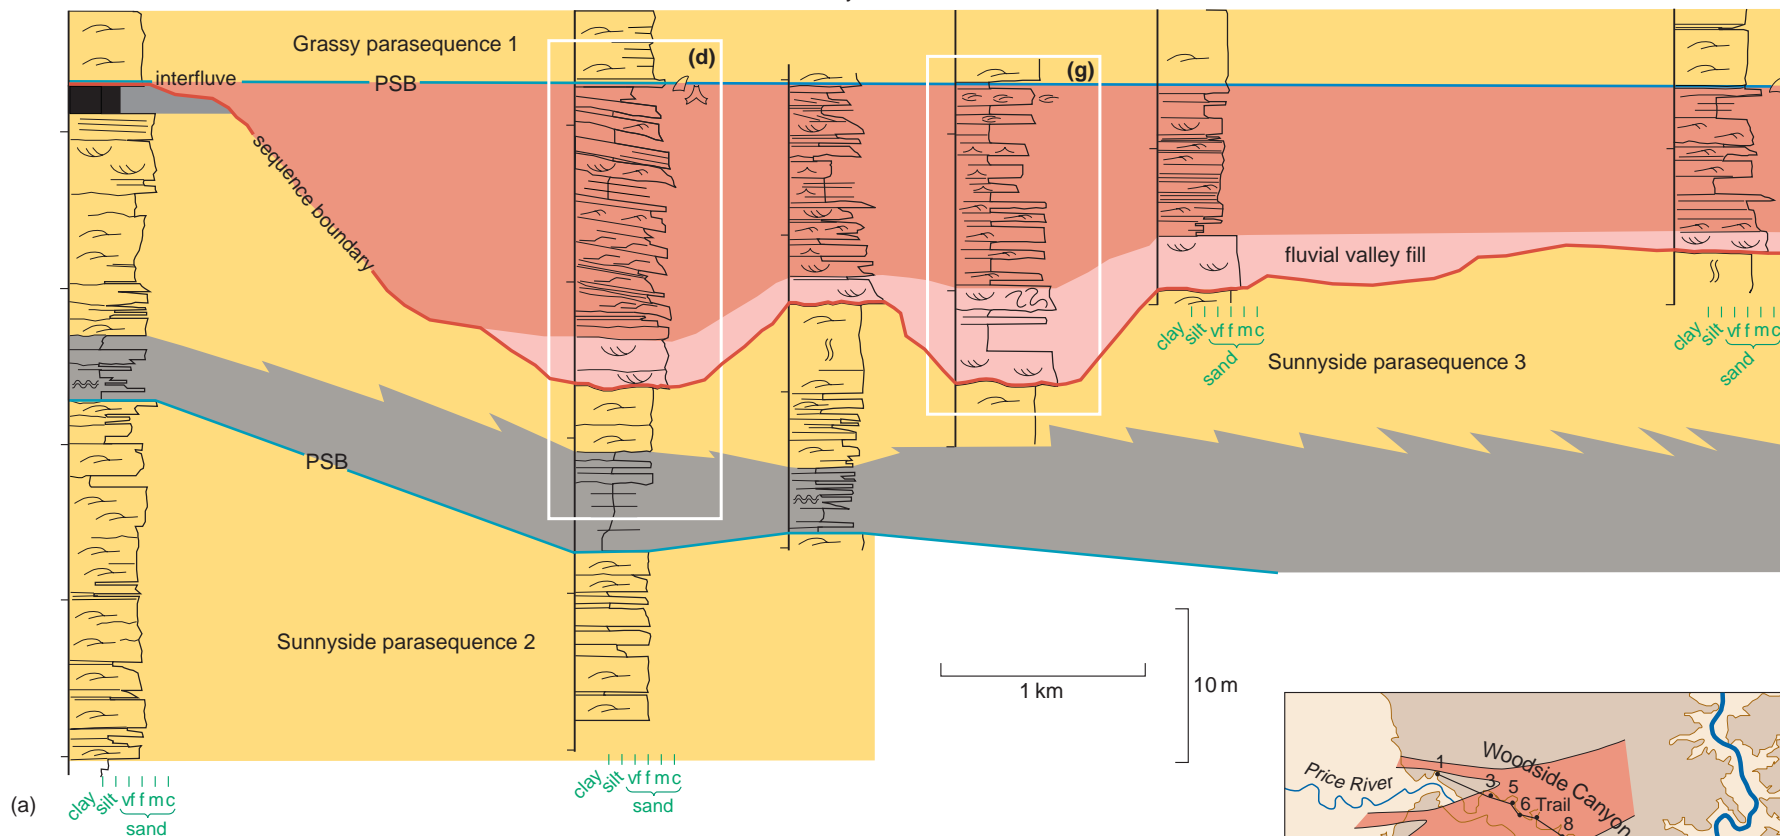

Woodside Canyon 3

Woodside Canyon 5

Woodside Canyon 6

Trail Canyon

Woodside Canyon 8

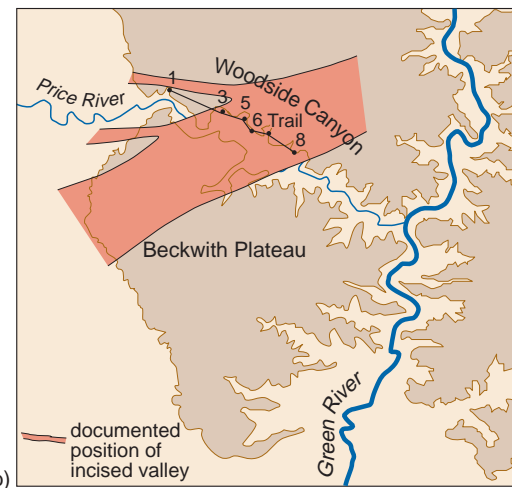

KEY

shoreface and foreshore facies	planar stratification	ripple cross-stratification
offshore transition zone and offshore facies	trough cross-stratification	wave ripples
tidal-incised valley fill deposits	hummocky cross-stratification	climbing ripples
fluvial-incised valley fill deposits	upper shoreface bioturbation	slump structures
coal	lower shoreface bioturbation	<i>Glossifungites</i> surface
		lag
		shell bed

predominant incised valley fill at each locality:

- Woodside Canyon 3 large-scale inclined heterolithic strata
- Woodside Canyon 5 tidal flat deposits
- Woodside Canyon 6 small-scale deltas, shell beds and thin coals
- Trail Canyon sandy tidal deposits
- Woodside Canyon 8 heterolithic tidal-incised fill
