

Because the input files for the online version of 9-7CMB.nb were created for faster running are by far the largest files needed to run the ATC Mathematica notebooks, we have provided the original WMAP tiff files which are smaller, but take much longer to process. Thus if it is desired to recreate the shorter runtime files, you must make a second copy of 9-7CMB.nb and manually uncomment the appropriate lines that import the tiff files. Save this modified copy (with extra R in title) and after running it, the original 9-7CMB.nb should work as intended.
